

Training Courses on Professional PID Usage and DO Application

EDOS is committed to maintaining European industry at the competitive edge by providing training courses about basic and advanced usage of globally resolvable and persistent identifiers and of the concept of Digital Objects to overcome the huge inefficiencies in data projects. Training course can be organised specialised to the needs of specific companies at their facilities or centralised.

Training courses contain theoretical as well as hands-on aspects to make in particular young people fit so that they are capable to integrate these concepts and core software and interfaces in data projects. The training courses are practical in so far as example industry scenarios are being put in focus.

Dependent on the focus defined for a specific training course, respected experts will be selected to act as trainers.

EDOS is ready to interact with interested companies about the organisation of high-profile training courses with the focus on advanced PID usage and DO applications.
